PROFESSIONAL SUMMARY

Computer Science Engineering student with hands-on experience developing backend and full-stack applications using **Java, Spring Boot, RESTful APIs, SQL, React.js, and Git**. Currently developing a full-stack Money Manager application with backend services, database integration, cloud deployment, and an AI assistant. Strong foundation in **Data Structures and Algorithms, Object-Oriented Programming, DBMS, API development, and software engineering fundamentals**. Seeking an entry-level Software Engineer or Java Backend Developer role.

TECHNICAL SKILLS

Programming: Java, Python, SQL, JavaScript

Backend: Spring Boot, Spring Framework, RESTful Web Services, REST APIs, CRUD, API Integration

Frontend: React.js, HTML5, CSS3

Databases: MySQL, MongoDB Atlas, Firebase

Cloud & Tools: Render, Git, GitHub, VS Code

Core CS: Data Structures & Algorithms, OOP, DBMS, Exception Handling, SDLC, Problem Solving

AI: Generative AI tools, AI API integration, AI-assisted application development

PROJECTS

Money Manager – Full-Stack Finance Application

Java, Spring Boot, React, SQL, AI

- Developing a full-stack personal finance application using **Java and Spring Boot** for backend services and React.js for the frontend.
- Building **RESTful APIs** for income, expenses, transactions, categories, and financial data management.
- Implementing backend business logic, CRUD operations, database connectivity, validation, and exception handling.
- Designing structured backend architecture for communication between the React frontend, REST APIs, and database layer.
- Integrating **MongoDB Atlas, Firebase, and Render** for cloud-based data services and application deployment.
- Developing an **AI assistant** to provide intelligent interaction and application-specific financial insights.

E-Commerce Web Application

Live Demo

- Developed a full-stack application with authentication, product management, database operations, and frontend-backend integration.
- Implemented REST APIs and CRUD operations and integrated frontend components with backend services.

Offline Data Analytics System

GitHub

- Developed a data collection and processing application for low-network environments, focusing on reliable data handling and synchronization.

EDUCATION

B.E. Computer Science and Engineering

Expected 2027

P.A. College of Engineering and Technology, Anna University

Current CGPA: 7.73/10

CODING PROFILE

LeetCode: leetcode.com/u/jaganpacet — Active problem solver focused on Data Structures and Algorithms.
